Three Anti-Paint Coatings, also known as conformal coatings, are specialized protective coatings applied to electronic circuit boards and components to provide three key protections: moisture resistance, salt spray resistance, and mold resistance (hence the term “three anti”). These coatings form a thin, transparent insulating layer that conforms to the shape of the board and shields it from environmental stressors such as humidity, dust, corrosion, and chemical contaminants. Commonly used in automotive electronics, aerospace, military, industrial controls, and consumer electronics, three anti-paint coatings enhance the long-term reliability, insulation, and durability of electronic assemblies, especially in harsh or high-humidity conditions.
