Abstracts

The global Three-channel Charge Signal Amplifier market size is predicted to grow from US$ 105 million in 2025 to US$ 152 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2024, global production of three-channel charge signal amplifiers reached 12.75 million units, with an average selling price of $7.97 per unit.

A three-channel charge signal amplifier is a three-channel synchronous signal conditioning device designed specifically for piezoelectric sensors. Its core function is to convert the weak charge signal output by the sensor into a low-impedance voltage signal through a charge-to-voltage conversion circuit. It also integrates a high common-mode rejection ratio differential input stage, an anti-aliasing filter, and a programmable gain amplifier to effectively suppress power frequency interference, electromagnetic noise, and temperature drift, achieving high-precision amplification and linearization of the three-channel parallel signal.

The upstream of the three-channel charge signal amplifier is piezoelectric materials and core electronic components (piezoelectric ceramics, application-specific integrated circuits, high-precision PCB boards, etc.), and representative companies include AVIC Electro-Mechanical Test, etc. The material properties directly affect the charge conversion efficiency and signal stability; the midstream is the manufacturing of three-channel charge signal amplifiers, which involves multi-channel synchronous acquisition technology, TEDS intelligent identification function development and miniaturization integration process. Representative companies include Beijing Anshitong Technology, AVIC Electro-Mechanical Test, etc. The products need to achieve precise amplification and anti-interference processing of weak charge signals; downstream applications are

concentrated in industrial vibration monitoring, aerospace testing, scientific research experiments and communications fields, which have strict requirements on the channel consistency, dynamic range and environmental adaptability of the amplifier.
