A Three Channel Vibration Meter Analyzer is a device used to measure and analyze the vibration levels of machines or structures. The analyzer typically consists of an accelerometer sensor, signal conditioning electronics, and a data acquisition system. The accelerometer measures the vibration signals and the signal conditioning

electronics amplify and filter the signals to prepare them for analysis. The data acquisition system then collects the signals and performs various analyses on them such as frequency spectrum analysis, time waveform analysis, and more advanced analysis techniques such as order tracking and envelope analysis.
