The global Three Chuck Laser Pipe Cutting Machine market size is predicted to grow from US$ 476 million in 2025 to US$ 897 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

The three-chuck laser pipe cutting machine is an advanced equipment specially designed for high-precision and high-efficiency processing of metal pipes. It adopts the collaborative clamping method of the front, middle and rear chucks to effectively avoid the shaking and deformation of the pipe during the cutting process. It is especially suitable for processing ultra-long, slender or easily deformed pipes. Its structural design not only improves the cutting accuracy, but also supports "zero tail material" processing, greatly improving the material utilization rate. The equipment can be widely used in metal furniture, fitness equipment, automobile manufacturing, oil pipelines and other industries. It can cut round tubes, square tubes, rectangular tubes, oval tubes, I-beams and other metal materials with various cross-sectional shapes, such as carbon steel, stainless steel, aluminum and copper. In addition, three-chuck laser pipe cutting machines are usually equipped with automatic loading and unloading systems to achieve highly automated production, effectively reduce labor costs and improve overall processing efficiency. They have become important technical equipment in the field of modern metal pipe processing.
