Three layer Double-sided FCCL refers to a layer of adhesive that is coated between the substrate and copper foil. This layer of adhesive can provide a certain degree of adhesion, helping to maintain the bonding between the copper foil and substrate during the processing, and also improving the mechanical strength and stability of the circuit board. The double-sided flexible copper clad plate is covered with copper foil on both sides of the flexible substrate, which allows for the arrangement of circuits on both sides, thereby increasing the flexibility and complexity of circuit layout.
