The global Three-Phase Aluminum Shell Motor market size is predicted to grow from US\$ 6832 million in 2025 to US\$ 11890 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

The three-phase aluminum shell motor is a three-phase asynchronous motor that uses aluminum alloy as the shell material. Compared with the traditional cast iron shell motor, the aluminum shell motor has the characteristics of light weight, superior heat dissipation performance, corrosion resistance, and beautiful appearance. It is widely used in industries, agriculture, construction equipment, and household appliances. Its shell is made of high-strength aluminum alloy material. After precision processing and oxidation treatment, it not only reduces the overall weight of the motor, but also improves the anti-oxidation and anti-corrosion capabilities. It is suitable for harsh environments such as high humidity and high salinity. The three-phase aluminum shell motor has a compact internal structure and runs smoothly. It is often used to drive fans, water pumps, compressors, conveying equipment, and CNC machinery, etc., to meet a variety of needs from ordinary power transmission to variable frequency speed regulation.

United States market for Three-Phase Aluminum Shell Motor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Three-Phase Aluminum Shell Motor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
