## Abstracts

The global Three-phase Asynchronous Motor for Metallurgical Hoisting market size is predicted to grow from US\$ 852 million in 2025 to US\$ 1425 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, global sales of three-phase asynchronous motors for metallurgical hoisting reached 150,000 units, with an average selling price of US\$5,800 per unit. These motors are high-power motors specifically designed for the metallurgical industry, primarily used to drive lifting equipment, smelting furnaces, conveyors, and other high-load metallurgical machinery. They can operate stably under high temperature, high load, and harsh working environments. These motors use three-phase alternating current and generate a rotating magnetic field through the interaction of the stator windings and rotor structure, featuring high starting torque, strong lifting capacity, high working efficiency, and robust structure. The industry's total production capacity is approximately 180,000 units per year, with an average gross profit margin of approximately 26%. Upstream raw materials mainly include silicon steel sheets, copper wire, aluminum alloys, and motor housings; downstream supply comes from metallurgical equipment manufacturers and crane manufacturers, with smelting and steel production accounting for 50% of downstream consumption. Future development lies in improving the motor's high-temperature resistance and durability, and promoting the application of intelligent and remote monitoring technologies to enhance equipment automation and safety. As the metallurgical industry's demand for energy efficiency and production automation grows, the market for metallurgical crane motors will continue to expand, and companies with technological innovation and high-quality production capabilities will gain a larger market share.
