The global Three-Quadrant Triac market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A three-quadrant triac (TRIAC) is an electronic device used for power control in AC circuits. It controls the flow of AC power, allowing current to flow in both directions. TRIAC can be turned on during both the positive and negative half cycles, so it can be used to control the power of the AC power supply. It is commonly used in applications such as dimmer switches, speed controls for power tools, heating controls, and more. A TRIAC usually consists of two thyristors (SCRs) but can conduct current in both directions.
