The raw materials mainly consist of three parts: ?movement + frame + electrical control?: the rollers use ?48?60 mm, 2.5 mm thick 304 stainless steel tubes, with a brushed or chrome-plated surface; the core of the movement is a 45# steel precision-cast ratchet, overrunning clutch, and DC24V geared motor; the side panels and brackets are laser-bent from 1.5?2.0 mm 304 stainless steel plates, with a glass bead blasted surface; the electrical control part includes an MCU control board, proximity sensor, RS485/232 communication module, and power-off drop-bar energy storage spring. Cost structure: stainless steel profiles and machined parts account for approximately 45?50% of the ex-factory price, motor + precision castings 15?20%, electrical control + wiring harness 10?12%, surface treatment and assembly labor 10%, with the remainder being packaging, transportation, and gross profit.
