The global Through-hole Aluminum Foam market size is predicted to grow from US\$ 44.71 million in 2025 to US\$ 64.84 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Through-hole aluminum foam refers to a foam aluminum material that forms a large number of interconnected holes during the manufacturing process. This material has the characteristics of both metal and bubbles, and has a series of excellent physical, chemical and mechanical properties. The holes of through-hole aluminum foam are interconnected to form a three-dimensional porous structure. The size, shape and distribution of these holes can be controlled through the production process to meet different application requirements. The density of through-hole aluminum foam is low, only 0.1~0.4 times that of metal aluminum, so it has the characteristics of light weight.

United States market for Through-hole Aluminum Foam is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
