A through-hole mount film capacitor is a type of capacitor that is commonly used in electronic circuits. Like other capacitors, they store charge and play important roles in circuits such as filters, couplers, and signal processors. Unlike surface mount capacitors, through-hole mount film capacitors have leads that are connected to the circuit by passing through small holes (vias) in the printed circuit board (PCB). This kind of capacitor usually adopts thin film dielectric, such as polyimide (PI), polyamide (PA), etc., which has the characteristics of high stability, reliability and low distortion. Through-hole mount type film capacitors are commonly used in high-frequency circuits, high-precision measurement equipment, audio amplifiers, LED lighting, and automotive electronics.
