The global Through-Hole Mount Isolated DC Converters market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A through-hole mounted isolated DC converter is an isolated DC converter that is characterized by using traditional through-hole technology to mount and connect components, usually by inserting them into holes on a printed circuit board, Then fix and connect by welding.

Through-hole mounted isolated DC converters usually have high power density and high dielectric strength, enabling stable operation in harsh operating environments. In addition, since its components are mounted in a manner that does not require the use of surface-mount equipment, production costs are low, making it suitable for high-volume production.
