The global Through Wall Radar market size is predicted to grow from US\$ 120 million in 2025 to US\$ 178 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

Radar systems for through-the-wall surveillance are handheld units typically used by law enforcement personnel to detect individuals behind doors, walls, and windows, hereinafter referred to as walls. These systems enhance situational awareness in operations such as forced entry and hostage rescue when knowledge of the whereabouts of individuals would be beneficial.

The ability of radar systems for through-the-wall surveillance to detect movement through walls is dependent upon how well the radio waves penetrate the wall. The material and thickness of the wall impact the ability of the system to acquire a reading; the radio waves cannot penetrate steel, and extremely thick barriers may block the radio waves or delay the time it takes to acquire a reading. In addition, interference may occur when simultaneously using multiple systems or other devices that operate within the same radio frequency range.

Systems may report the location of movement in either one-dimension (1-D) or two-dimensions (2-D). A 1-D system displays a target's distance from the sensor while a 2-D system displays x and y distances from the sensor.

The global key through wall radar manufacturers include L3Harris Security & Detection Systems, Camero, STM Savunma Teknolojileri M?hendislik, etc. Top 3 manufacturers accounted for 55.92% market share in 2019.
