The global Thyristor Dimming Power Supply market size is predicted to grow from US\$ 250 million in 2025 to US\$ 368 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

The thyristor dimming power supply is a power supply device that adjusts the output voltage by controlling the conduction angle of the thyristor (SCR), thereby adjusting the brightness of the light source. It is mainly used for dimming traditional AC lamps such as incandescent lamps and halogen lamps. By changing the conduction time of the thyristor in the AC cycle, the amplitude of the current is adjusted to achieve the brightness adjustment of the lamp. Compared with other dimming methods (such as PWM dimming), the thyristor dimming power supply has the advantages of low cost, smooth dimming, and strong adaptability. It is widely used, especially in lighting equipment with high power requirements and little change in brightness.

United States market for Thyristor Dimming Power Supply is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
