The global Thyristors ICs and Modules market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Thyristors are semiconductor devices used primarily as switches in various power control applications. They operate as bistable switches, meaning they remain in either an on or off state until triggered by an external signal. Thyristors are capable of handling high currents and voltages, making them valuable in power electronics and control systems.

At present, major global companies include STMicroelectronics, Ruineng Semiconductor, Littelfuse, Renesas Electronics and Vishay, etc. The share of the top five major companies in 2022 will exceed 60.15%. It is expected that industry competition will become more intense in the next few years, especially in the Chinese market.
