TIG, or Tungsten Inert Gas (also known as GTAW - Gas Tungsten Arc Welding), is an arc welding process that uses a non-consumable tungsten electrode and an inert gas (typically argon or helium) to create a clean weld. The intense heat generated by the arc melts the base metals to form the weld joint. TIG welding offers precise control over the weld pool, making it ideal for thin materials and applications requiring a high-quality finish.

The global TIG Welding Services market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
