A tile bevelling machine is a specialized tool designed to create beveled or chamfered edges on tiles, typically used in construction and interior design to achieve polished, professional finishes. It operates by grinding or cutting the tile's edge at a specific angle, usually between 15 to 45 degrees, to remove sharp corners and create a sloped surface that enhances aesthetic appeal and prevents chipping. These machines often feature adjustable guides and diamond - tipped blades or grinding wheels to ensure precise and consistent bevels, accommodating various tile materials like ceramic, porcelain, marble, or granite. They can be handheld for small - scale projects or stationary for industrial use, enabling installers to seamlessly fit tiles around corners, edges, or fixtures—such as sinks, countertops, or shower niches—while minimizing gaps and improving the overall durability of the installation.
