Tile hollow repair agents are specialized construction chemicals designed to fix hollowing or loosening issues of ceramic wall and floor tiles. Typically offered in syringe-type packaging, they are formulated with modified epoxy resins, polyurethane, or acrylic-based adhesives. By injecting the agent into tile gaps, the adhesive fills the voids between tiles and the substrate, restoring bonding strength without the need to remove and re-lay tiles. These agents are valued for their easy application, fast curing, durability, and cost-effectiveness.

In the supply chain, the upstream consists of suppliers of epoxy resins, curing agents, polyurethane, and packaging materials; while the downstream covers building material retailers, renovation companies, construction teams, and end consumers. With its efficiency and affordability, this product has become a popular solution in home renovation and building maintenance.
