Tile-in Shower Drains are concealed drainage systems designed to integrate seamlessly with floor tiles in bathrooms and shower areas. Unlike traditional exposed drains, tile-in drains allow the floor tile to be installed on top of the drain cover, creating a nearly invisible drainage outlet. These systems are widely used in modern residential bathrooms, hotels, and luxury building projects due to their aesthetic appearance and improved water drainage performance. Tile-in shower drains are typically made from stainless steel or corrosion-resistant materials and are designed to prevent water leakage and ensure efficient drainage.

The industrial chain includes upstream stainless steel sheets, polymer drainage components, sealing materials, and precision machining parts. Midstream manufacturing involves metal forming, welding, surface treatment, and assembly. Downstream users include residential construction projects, commercial buildings, hotels, and interior renovation contractors. Supporting services include installation guidance, waterproofing solutions, and plumbing system integration.
