Tillers and cultivators are agricultural implements designed for soil preparation and cultivation tasks in gardening and farming. A tiller is a powerful machine equipped with rotating blades or tines that dig into the soil, breaking it up and turning it over. This helps in aerating the soil, removing weeds, and preparing the ground for planting. Tillers are especially useful for larger areas and heavy-duty tasks. Cultivators, on the other hand, are typically smaller and lighter machines, often handheld or attached to a garden tractor. They are used for finer soil cultivation, weeding, and preparing seedbeds. Cultivators are well-suited for working in between rows of crops and in smaller garden plots. Both tillers and cultivators play crucial roles in soil management, helping farmers and gardeners create optimal conditions for plant growth and maximize agricultural productivity.
