A Tiltrotor eVTOL (electric Vertical Take-Off and Landing) aircraft combines the vertical lift capability of a helicopter with the speed and range of a fixed-wing airplane. It features rotors mounted on rotating nacelles or wings, which allow the aircraft to take off and land vertically like a helicopter and then transition to horizontal flight for efficient forward travel. Powered by electric propulsion systems, tiltrotor eVTOLs are being developed for various applications, including urban air mobility, emergency response, and cargo transport, promising reduced noise, lower emissions, and increased flexibility compared to traditional aircraft.

The global Tiltrotor eVTOL market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
