Tin-bismuth low temperature solder paste is a soldering material made from a tin-bismuth alloy, commonly used for soldering temperature-sensitive electronic components. With a lower melting point, typically around 138°C, it is ideal for applications where traditional soldering temperatures cannot be tolerated, especially in precision electronics and plastic-encased parts. Tin-bismuth low temperature solder paste offers good wettability and flow characteristics, helping to minimize thermal damage to components during soldering, thus enhancing product reliability.
