Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Tin Selenide market.

Tin selenide is an inorganic compound with the formula SnSe . Tin(II) selenide is a typical layered metal chalcogenide as it includes a group 16 anion (Se^{2-}) and an electropositive element (Sn^{2+}), and is arranged in a layered structure. Tin(II) selenide is a narrow band-gap (IV-VI) semiconductor structurally analogous to black phosphorus. It has received considerable interest for applications including low-cost photovoltaics, and memory-switching devices. Because of its low thermal conductivity as well as reasonable electrical conductivity, tin selenide is one of the most efficient thermoelectric materials.
