Tinplate is a thin sheet of steel that is coated with a layer of tin. This process is done through electroplating, where the tin is deposited onto the steel sheet using an electric current. The tin coating provides protection against corrosion, making it an ideal choice for food packaging. Tinplate cans are commonly used for packaging food items like vegetables, fruits, soups, and drinks.

Film laminated steel sheet refers to a type of steel product that consists of multiple layers of different materials bonded together. This composite structure is achieved by

using various methods, such as adhesive bonding or roll bonding. The outer layers of laminated steel sheet are typically made of steel, providing strength and durability. The inner layers can be made of different materials, such as plastics, polymers, or other metals, depending on the intended application.
