## Abstracts

The global Tire Pyrolysis Equipment market size is predicted to grow from US\$ 125 million in 2025 to US\$ 795 million in 2032; it is expected to grow at a CAGR of 30.8% from 2026 to 2032.

Car tires are usually made of natural rubber, synthetic rubber, steel cord, and carbon black for strength and durability. After being discarded, the sturdiness of these tires has brought troubles to environmental protection. It is difficult for these tires to be degraded naturally by ordinary landfill methods, and once the piled up tires are ignited, not only will there be a fire but also damage the environment. The environment produces huge pollution. The tire pyrolysis equipment can keep working 24 hours a day, with high efficiency and high production capacity. The slag can be discharged without waiting for the reactor to cool down, saving time and fuel for preheating the reactor. Tire pyrolysis equipment turns waste tires into usable resources, greatly reducing environmental pollution and improving resource utilization. Tire pyrolysis equipment is divided into intermittent pyrolysis equipment and continuous pyrolysis equipment.

United States market for Tire Pyrolysis Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tire Pyrolysis Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
