## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Tire Recycling Machines refer to equipment used to recycle scrap tires and convert them into reusable products or energy. These include two main types: Tire Shredder and Tire Pyrolysis Equipment.

Tire Shredder cuts tires into smaller pieces or fine particles, providing feedstock for subsequent processing steps such as grinding, regeneration or energy recovery.

Tire Pyrolysis Equipment uses pyrolysis technology to decompose waste tires into oil, gas and residual solids at high temperatures. The pyrolysis oil can be used as fuel or chemical feedstock, the gas can be used in heating equipment, and the residual solids can be used as filler or further processed into products such as carbon black.

These equipment are usually used to process waste tires to reduce environmental pollution and achieve resource reuse. They help reduce the negative environmental and health impacts of discarded tires and provide a sustainable solution for the tire recycling industry.

The global Tire Recycling Machines market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
