The global Tire Reinforcement market size is predicted to grow from US\$ 13050 million in 2025 to US\$ 15870 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Reinforced tires are rigid, offer stability, better traction, greater adhesion properties, and are more resistant to mechanical damage. Besides the capability to carry the extra load, these tires have a longer life than normal tires and are not prone to internal damages. Reinforced tires have more usage in vans, trucks, estate cars, sports cars, and delivery vehicles as they can withstand higher pressure and increased load capacity.

In 2022, global tire sales reached 1.749 billion units, of which the three major markets of Europe, North America and China will collectively sell 1.14 billion units, accounting for 65% of the total. China is the world's largest tire producer and exporter. Among the top 75 tire companies in 2022 released by Tire Business, 34 are Chinese companies (including 5 from Taiwan), with a total sale of approximately US\$ 34.5 billion, accounting for approximately 19.42% of the total global sales. According to data from the National Bureau of Statistics, by the end of December 2022, the output of rubber tire casings in China was about 856 million. According to the data of the General Administration of Customs, in 2022, the cumulative export volume of rubber tires in China was 7.65 million tons, a year-on-year increase of 4.7%; the export value was ?131.418 billion, an increase of 16%; the trade surplus was 103.709 billion yuan, an increase of ?15.89 billion.
