The global Tire Valve market size is predicted to grow from US\$ 1175 million in 2025 to US\$ 1573 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The tire valve allows air to be added to a tire with an air hose and allows air to be withdrawn from an over-inflated tire by pressing on a stem at the end of the valve.

The Tire Valve Market refers to the global industry that deals with the production and supply of tire valves, including valve stems and valve cores, which are essential components for tire inflation and pressure regulation. The tire valve market is closely linked to the automotive, tire manufacturing, and replacement parts industries. Tire valves ensure the proper functioning of vehicles by maintaining tire pressure, improving safety, fuel efficiency, and extending tire lifespan. These are the parts of the tire valve that allow air to enter or exit the tire. They are typically made from rubber or metal and come in various lengths and designs for different types of vehicles (passenger cars, trucks, motorcycles, etc.). The core is the internal mechanism inside the valve stem that controls the air flow. It is a small, but crucial, part that can either be manual or automatic (for systems like Tire Pressure Monitoring Systems, TPMS). The demand for tire valves is closely tied to the growth of the automotive industry, especially with increasing production and sales of vehicles globally. As more vehicles are manufactured, the demand for tire valves grows. Tire valves are frequently replaced during tire maintenance, repairs, and replacements, as they are critical for ensuring proper tire inflation and safety. The growing demand for aftermarket automotive parts has a direct impact on the tire valve market. Many countries now mandate the use of TPMS in vehicles, which monitor and display tire pressure. This has led to an increased demand for specialized tire valves that are compatible with these systems. As tire pressure is crucial for vehicle safety, the demand for high-quality tire valves continues to rise. Well-

maintained tires, supported by reliable tire valves, reduce the risk of accidents caused by underinflated or overinflated tires.
