According to our LPI (LP Information) latest study, the global Tissue Heart Valves market size was valued at US$ million in 2023. With growing demand in downstream market, the Tissue Heart Valves is forecast to a readjusted size of US$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Tissue Heart Valves market. Tissue Heart Valves are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Tissue Heart Valves. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Tissue Heart Valves market.

Tissue or biological heart valve is made from animal tissue, such as porcine (pig) or bovine (cow), as it is similar to human tissue. Tissue heart valves need chemical treatment for protection and stent or frame for support. Tissue heart valves can last up to 10 to 20 years.

The global tissue heart valves market is expected to grow substantially due to high prevalence of heart valve diseases, which is constantly rising due to socioeconomic factors, such as lifestyle-induced dietary, physical inactivity, and certain other habits, including smoking. Moreover, longer life expectancy of the geriatric population boosts the growth of the tissue heart valves market. As per a report of the National Institutes of Health (NIH), 8.5% of the world population is aged 65 or above, and it is anticipated to rise to nearly 17% by 2050. In addition, increase in demand for minimally invasive procedures and technological advancements are projected to propel the growth of the

tissue heart valves market during the forecast period. On the other hand, stringent government approval process and high price of minimally invasive procedures are hindering the market growth. Nevertheless, huge unmet needs in the emerging markets and advanced treatment of valvular diseases are expected to create opportunities for the tissue heart valve market.
