For immunocytochemistry, fixed tissue must be cut in thin sections to be viewed in the light or fluorescence microscope. Rising prevalence of chronic diseases and cancers is one of the crucial factors driving demand for histopathology tests as a tissue pathology examination is of utmost importance for the diagnosis of a malignant tumor. Cancer is considered as one of the leading causes of death worldwide. Analysis of biopsy tissues enables pathologists to determine cancer type, stage, and the degree to which the disease has invaded healthy tissues.
