The global Titanium Alloy Porcelain Crown market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Titanium alloy porcelain crown is a restoration that combines titanium alloy material and porcelain layer. It is made of titanium alloy inside and covered with a layer of porcelain outside. This restoration is formed by high-temperature sintering and fusing porcelain powder to the surface of the titanium alloy inner crown. It has both the mechanical strength of titanium alloy and the aesthetics of porcelain layer. The main metal components in the titanium alloy porcelain crown are composed of three metals: titanium, nickel and chromium. Since titanium has a high affinity with other metals, there are also versions synthesized with other precious metals. Generally, the titanium content is more than 50%, and the rest is nickel and chromium or other metals that are harmless to the human body.

As a high-end dental restoration material, the market size of titanium alloy porcelain crowns has shown a steady growth trend in recent years. With the improvement of oral health awareness and the intensification of the aging trend of the population, the market demand for titanium alloy porcelain crowns continues to grow. Titanium alloy porcelain crowns are mainly used in the fields of tooth restoration and cosmetic dentistry. Its excellent biocompatibility, corrosion resistance and mechanical properties make it an ideal choice for anterior and posterior tooth restoration. In cosmetic dentistry, titanium alloy porcelain crowns can significantly improve the aesthetics of teeth and meet patients' high requirements for tooth color and shape. In summary, the titanium alloy porcelain crown market will continue to maintain a steady growth trend in the future.
