Titanium-based catalysts for polyester refer to catalysts with titanium compounds as the main component, which are specially used in the synthesis process of polyester (such as polyethylene terephthalate PET). They usually play a catalytic role in the esterification or polycondensation stage. They have the advantages of high catalytic activity, good thermal stability, and less metal residue. They can partially replace traditional antimony-based catalysts and are widely used in the green and efficient production of polyester materials such as food packaging, fibers, and films.
