Titanium dioxide for ink is a high-performance white pigment used in the manufacture of inks. Its main component is titanium dioxide (TiO₂). It has excellent hiding power, gloss, dispersibility and weather resistance, and can significantly improve the whiteness, brightness and adhesion of ink, ensuring clear and stable printing effects. Titanium dioxide used in inks usually adopts anatase or rutile crystal structure, among which rutile titanium dioxide is more suitable for high-end inks due to its high hiding power and light resistance. It is widely used in lithographic printing inks, gravure printing inks, flexographic printing inks and screen printing inks, and performs particularly well in high-quality packaging printing and publishing printing.
