The global Titanium Dioxide for Plastics market size is predicted to grow from US\$ 6802 million in 2025 to US\$ 10230 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Titanium dioxide (TiO₂) is one of the most important pigments. It is widely used because it efficiently scatters visible and absorbs UV light, thereby imparting whiteness, brightness, and opacity when incorporated into a plastic. Adding the titanium dioxide to plastics can improve the heat resistance, light resistance, and weather resistance of plastic products, protect plastic products from ultraviolet rays, and improve the mechanical and electrical properties of plastic products.

The plastics and packaging industry uses titanium dioxide for its opacity and UV resistance. The growth of e-commerce and increased demand for packaging materials have influenced the TiO₂ market. The Asia-Pacific region, particularly China, has been a dominant player in the global TiO₂ market, both in terms of production and consumption. China's environmental policies and regulatory changes can impact the global market.
