The global Titanium Dioxide Coated Micas market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Nano-scale titanium dioxide (T20Q) and aluminum powder mixed pigments or mica pearlescent pigments coated with nano-titanium dioxide are added to the coating, and the coating can produce mysterious and changing color-dependent effects, mainly because when incident light hits For titanium dioxide particles, due to the small particle size, the blue light will be strongly scattered. As a result, the green light and red light (yellow phase) that remove the blue light are reflected by the aluminum sheet and become regular reflection light, that is, the scattered light has a strong blue phase. Light, the reflected light is light with a strong yellow phase (gold), and different hues can be seen with different viewing angles.
