Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Titanium Nitride Powder market.

Titanium nitride (TiN) is an extremely hard ceramic material, the molecular formula is TiN, the molecular weight is 61.88, the particle size of nano-scale titanium nitride is from 20nm-500nm, the particle size of micron-scale titanium nitride is from 1?m-40?m, and the purity is from 2N to 5N. Nano-scale titanium nitride powder: the particle size is below 500 nanometers, and has the advantages of high specific surface area, high activity and high hardness, and can be used to prepare high-performance coatings, composite materials and catalysts. Micron-sized titanium nitride powder: the particle size is between 1-100 microns, with good thermal stability, wear resistance and electrical conductivity, etc., and can be used to prepare knives, molds, electrodes and electronic

devices. TiN powder is generally yellowish brown, and ultrafine TiN powder is black. Coatings less than 5 microns in most applications are commonly used as coatings on titanium alloys, steel, carbide and aluminum components to improve the surface properties of substrates and as a non-toxic external medical implant, An ideal surface treatment material for jewelry and automotive trim, TiN is an important compound to enhance the performance of TiC-based cermet cutting tools. With the recent rapid increase in the use of cermet cutting tools, the demand for titanium nitride powder is also growing.
