Titanium silicon alloy material is a high melting point intermetallic compound with low density and good oxidation resistance. TiSi₂ is an important silicide with good high-temperature stability, high-temperature strength, and good oxidation resistance. It is expected to become a structural material for use above 1200 ° C. Due to its low electrical resistance and thermal resistance, TiSi₂ is also expected to be used in electrical connection and diffusion barriers. It has been widely used as ohmic contact and metal interconnect materials in ultra-large-scale integrated circuit manufacturing technology. In addition, TiSi₂ thin films Pressure is very sensitive and is expected to be a pressure sensor material at high temperatures. Ti₅Si₃ has a hexagonal D88 crystal structure, which has the advantages of high temperature strength and good high temperature oxidation resistance. TiSi has many excellent properties such as low resistivity, high thermal stability, and chemical stability.
