The global Titanium Silicon Molecular Sieve market size is predicted to grow from US\$ 428 million in 2025 to US\$ 596 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Titanium silicate molecular sieve is a type of heteroatom molecular sieve material mainly composed of silicon oxygen skeleton, which introduces a small amount of titanium atoms into the molecular sieve structure through equi substitution to form Si-O-Ti active centers. The typical representative is TS-1 type MFI structure molecular sieve. This material has a uniform microporous structure and excellent oxidation catalytic performance, which can efficiently activate hydrogen peroxide isotherms and oxidants, thereby exhibiting high activity and selectivity in selective oxidation reactions. It is widely used in green chemical processes such as olefin epoxidation, alcohol oxidation, and fine chemical intermediate synthesis, and is a typical functional catalytic molecular sieve material. In 2025, global Titanium Silicon Molecular Sieve production reached approximately 7,961 MT, with an average global market price of around US\$ 55 per kg.

Titanium silicate molecular sieve belongs to the high-end catalytic material subdivision field with high technological barriers. Its core value is reflected in the green oxidation process replacing traditional high pollution catalytic systems, especially in industrial routes such as HPPO (hydrogen peroxide to propylene oxide) where demand continues to increase. The current market is dominated by European, American, and Japanese companies in high-end industrial applications, while Chinese companies are developing rapidly in scientific research and pilot products and gradually achieving domestic substitution. The future growth of the industry is mainly driven by the upgrading of green chemicals, fine chemicals, and stricter environmental regulations, showing a stable growth trend overall, and continuously evolving towards multi-level pore structure, high

stability, and industrial continuous reaction adaptation.
