TLC flash (triple-level cell flash) is a type of NAND flash memory that stores three bits of data per cell. TLC is also known as MLC-3, 3-bit MLC and X3. Two of the main advantages of TLC NAND flash over SLC and MLC are storage density and cost per bit. Because TLC flash stores more bits per cell, it can triple the capacity of SLC and offer 1.5 times more storage than two-bits-per-cell MLC. NAND manufacturers achieve the same capacity with a TLC die than they do with a 32 Gb MLC die by reducing the die

size from 16 billion cells to 10.667 billion cells, enabling cost savings.
