The global TMR Sensors market size is predicted to grow from US\$ 223 million in 2025 to US\$ 277 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A TMR sensor element is a magnetic sensor element using the Tunnel Magneto-Resistance effect (TMR effect).

TMR (Tunnel Magneto Resistance) is a new technology, using magneto resistance effect sensors for industrial applications in recent years. Its tunnel magneto resistance effect is induced by magnetic multilayer film material, the rate of resistance change of TMR performs better than AMR's and GMR's. We usually refer TMR to Magnetic Tunnel Junction (MTJ). Comparing with the Hall element, the MTJ element has better thermal stability, higher sensitivity, lower power consumption, better linearity, no additional polyethylene magnetic circular structure. Relative to AMR, TMR has better temperature stability, higher sensitivity, wider linear range and no additional set / reset coil structure; Relative to the GMR, TMR has higher stability in temperature, higher sensitivity, lower power consumption and wider linear range.

Global key players of tunneling magnetoresistance (TMR) sensors include TDK, Infineon Technologies, Crocus Technology, Coto Technology, MultiDimension Technology, etc. Global top five manufacturers hold a share over 86%. The key players are mainly located?
