The global TOF Laser Sensor market size is predicted to grow from US\$ 1418 million in 2025 to US\$ 5377 million in 2032; it is expected to grow at a CAGR of 21.4% from 2026 to 2032.

TOF laser sensor, full name Time of Flight laser sensor, is a sensor based on the principle of laser pulse flight time measurement. It calculates the distance between the object and the sensor by emitting laser pulses and measuring the time difference from the emission to the reception after being reflected by the object. This sensor has the characteristics of high accuracy, long-distance measurement capability and fast response.

The increasing integration of TOF sensors in smartphones and tablets is driving the market demand. There are more and more TOF sensors used in autonomous vehicles for advanced driver assistance systems. The demand for TOF sensors is also increasing for virtual reality (VR) and augmented reality (AR) devices.
