The global TOF Lidar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Lidar is generally divided into pulse type and continuous wave type. Pulse lidar uses time interval to calculate relative vehicle distance; The continuous wave lidar obtains the target distance by calculating the phase difference between the reflected light and the reflected light. Specifically, the technical point of lidar is TOF (time of flight). After the radar emits the laser, it will turn back when encountering obstacles. The returned beam will be analyzed by the radar internal receiver, and finally processed in the processor through the turn back time and measurement signal, so as to generate an accurate 3D map and restore the surrounding environmental features.

United States market for TOF Lidar is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
