Toilet High Pressure Molding Equipment refers to a manufacturing process used to create various plastic or composite parts for toilets. In this process, a pre-measured and preheated material (such as a thermosetting polymer or thermoplastic compound) is placed into an open mold cavity. The mold is then closed, and high pressure is applied to compress the material, shaping it into the desired form. Heat is often used alongside pressure to facilitate curing or melting. The result is a durable toilet component.
