The global Toilet Sensor Light market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Toilet sensor light is a smart lighting device that is usually used to provide toilet lighting at night. These lights have a sensing function that can detect the approach of a human body. When someone approaches the toilet, the lights will automatically light up to provide enough light to allow users to easily find the toilet without turning on the entire bathroom lighting. Toilet sensor lights in the future may become more intelligent, have network capabilities, can be remotely controlled through mobile apps, or integrate with other smart home devices to provide more automation and convenience.
