The global Tool Passivation Machine market size is predicted to grow from US$ 266 million in 2025 to US$ 369 million in 2031; it is expected to grow at a CAGR of 5.6% from 2025 to 2031.

Tool passivation machine is a kind of equipment specially used for the passivation treatment of tool surface. Passivation treatment forms a uniform oxide film on the surface of the tool through chemical or electrolytic reaction, thereby enhancing the corrosion resistance and wear resistance of the tool and extending its service life. The passivation process usually includes cleaning pretreatment of the tool, chemical reaction immersed in the passivation liquid, electrolytic passivation (optional), and cleaning and drying after treatment. Tool passivation machine is widely used, especially in the field of tools that require high temperature resistance, high corrosion resistance and long-term use, such as metal processing, machinery manufacturing and other industries. The design of the passivation machine needs to take into account efficient processing capabilities, precise control, corrosion-resistant materials and operational safety.

United States market for Tool Passivation Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
