The tool setting instrument is composed of a high-precision switch (probe), a hard alloy tetrahedron (tool setting probe) with high hardness and high wear resistance and a signal transmission interface (other parts omitted). The tetrahedral probe is used to make contact with the tool and transmit the force to the high-precision switch through the flexible support rod installed under it; the on and off signals from the switch are transmitted to the CNC system through the signal transmission interface Tool direction recognition, calculation, compensation, access, etc. are performed in the process.
