The global Toothed Liquid Fertilizer Spreader market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The toothed liquid fertilizer spreader is a kind of mechanical equipment used in agricultural production, which can evenly spread liquid fertilizer in the farmland. It adopts a gear-type conveying device, which drives the drum to rotate through the gear, pumps the fertilizer out of the liquid storage tank, and distributes it evenly to the gear through the distributor. The rack on the gear squeezes the fertilizer out of the drum to form fine granules, which are then evenly spread over the field.

The toothed liquid fertilizer spreader has the advantages of high precision, uniform spreading, and high efficiency, and can meet the needs of different crops and different terrains. At the same time, it can also adjust the spreading amount and spreading range according to the needs of different crops, so as to achieve the best fertilization effect. The toothed liquid fertilizer spreader has been widely used in modern agricultural production.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer

consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
