Abstracts

The global Toothpaste Grade Abrasive Silica market size is predicted to grow from US$ 225 million in 2025 to US$ 612 million in 2032; it is expected to grow at a CAGR of 15.7% from 2026 to 2032.

Toothpaste Grade Abrasive Silica is a high-purity amorphous powder produced through a controlled wet-precipitation process, featuring tunable abrasive strength and rheology-modifying capability to enhance stain removal efficiency and maintain paste stability while protecting enamel. In 2024, the production was 142,143 tons and the average price was $1,400 per ton. A typical single-line annual capacity was about 2,000 tons and the average gross margin was about 63%. Its upstream raw materials are water glass and sulfuric acid, with representative suppliers including Solvay, PQ Corporation and BASF. The midstream involves controlled precipitation and drying, particle-size classification, surface modification and quality testing to ensure stable abrasive performance and impurity safety. Downstream applications cover low-end and high-end toothpaste formulations, with representative customers such as Colgate, P&G and Unilever.

The market outlook for Toothpaste Grade Silica remains robust as global consumers place greater emphasis on oral hygiene, premium toothpaste formulations, and sensitivity-care products. Demand is supported by its role as a mild abrasive and rheology modifier that enhances cleaning efficiency while maintaining enamel safety. Growth will also be driven by the expansion of whitening, natural-origin, and low-abrasivity product lines, which increasingly rely on engineered silica grades with controlled particle morphology and optimized performance. As emerging markets continue to upgrade daily-care consumption, manufacturers of oral-care brands will accelerate adoption of high-purity silica to differentiate product function and texture,
