## Abstracts

The global TOPCon Solar Cell Silver Metallization Paste market size is predicted to grow from US\$ 4662 million in 2025 to US\$ 6078 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

TOPCon Solar Cell Silver Metallization Paste refers to silver pastes used to metallize TOPCon cells, i.e., cells featuring tunnel-oxide passivated contacts (typically an ultra-thin tunnel oxide plus doped poly-Si passivating contact stack). These pastes are designed to create low-loss, low-resistance contacts on TOPCon-relevant surfaces while maintaining good line definition for screen printing; industrial TOPCon has also drawn attention for its relatively high silver demand compared with earlier PERC flows.

Upstream, TOPCon Ag pastes still follow the classic thick-film paste architecture—silver powder + inorganic frit/additives + organic vehicle—but are tuned for contact formation on passivating-contact stacks and for fine-line printing. Downstream, they are used in TOPCon cell production via screen printing followed by appropriate thermal processing, then module interconnection and lamination.

In 2025, global sales of TOPCon Solar Cell Silver Metallization Paste reached approximately 4,873 tons, with an average global market price of around US\$ 978/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 5% to 20%.
