The global Topical Skin Adhesive market size is predicted to grow from US\$ 865 million in 2025 to US\$ 1380 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Topical skin adhesives are medical “skin glues” designed for surface skin closure of surgical incisions or lacerations, most commonly based on medical-grade cyanoacrylates that polymerize on contact with moisture to form a flexible film over well-approximated wound edges. They are typically used for clean, low-tension wounds with easily aligned skin margins, and may be used alongside deeper closure when needed. Beyond approximation, they are often positioned as a protective barrier supporting efficient emergency repair, outpatient workflow gains, and patient-preferred cosmetic outcomes. In 2025, global Topical skin adhesives production reached approximately 63.15 million unit and price is about 14 USD/Unit. The average gross profit margin of this product is 45%.

The key drivers of the topical skin adhesive market is the increasing trend toward minimally invasive procedures. Patients and healthcare providers are seeking alternatives to traditional sutures and staples, which can cause discomfort and scarring. Topical skin adhesives offer faster application, reduced infection risk, and improved cosmetic outcomes, making them an attractive option in surgical, emergency, and outpatient settings. Additionally, advances in adhesive technology have led to the development of more durable and flexible products that further enhance their clinical use.

A major challenge in the topical skin adhesive market is the potential for product failure in high-tension areas or on patients with compromised skin, such as those with diabetes

or thin skin. In such cases, adhesives may not provide sufficient strength to hold the wound closed, necessitating alternative closure methods. Furthermore, the initial cost of these products remains higher than traditional options like sutures or staples, which can be a barrier for adoption in cost-sensitive healthcare environments, especially in developing regions.
